Worksheet Round 2

(Re)framing the data: What could this become?

Exchange and reflect on your datasets as a group, and consider how they could be used. You can respond in any format, such as notes, a rough map idea, discussion points, something visual, or a concept sketch. Focus on ideas, exchange and creative possibilities rather than polished outputs.

These following questions may help stimulate your discussion, though you're welcome to explore other directions as well:

- How do your datasets intersect?
- What does the combined picture reveal that each dataset alone doesn't?
- How could you ethically map the datasets? And for whom?
- What questions could you ask to the datasets and what maps could you make based on them? Try adopting different perspectives and asking various questions.
- · Which stakeholders are missing?
- Would you share this map with the communities it affects?
- What information is missing from your dataset(s)?
- What questions do you still need to ask about the data?
- What other sources are needed?
- What would help you to work more critically with the datasets?
- What material could supplement your map(s) for a more comprehensive perspective?
- Could it be the better choice to not create a map out of this data?

During the discussion, we invite you to also collect more general methods and approaches for an ethical data practice in cartography that come to your mind during the process in the Menti (online survey).
